1 IMPORTANT DATES

2 OVERVIEW

3 Deliverable 1 - Idea Approval (5%)
3.1 Due: Week 8-9
3.2 Submission:

4 Deliverable 2 - Documentation and Prototype (10%)
4.1 Due: Week 11
4.2 Submissions:

5 Deliverable 3 - Playtesting Build(s) and Feedback Reports (5%)
5.1 Due: Week 13

6 Final Presentations
6.1 Due: Week 14
6.2 Submissions:

7 Final Deliverables:
7.1 Due: Week 14

8 NB: ALL GAMES MUST CONTAIN THE FOLLOWING

1 IMPORTANT DATES

This project is broken into 4 distinct parts each with their own due dates and requirements.

Part	Deliverables	Due Date	Weight
Part 1	Idea Approval	Week 8-9	5%
Part 2	Documentation and Prototype v1	Week 11	10%
Part 3	Playtesting and Feedback	Week 13	5%
Part 4	Final Deliverables	Week 14	15%
Part 5	Final presentation	Week 14	5%

2 OVERVIEW

Each Studio creates a **Serious 3D Game in Unity** that attempts to teach the player a specific skill. A serious game is one in which its primary purpose is education but also contains game-like elements to improve the fun-factor and enjoyability of the game. As a Studio you may select to make any serious game you wish. You may select to flesh out as an **educational game** (with corresponding **Game Design** and **Instructional Design** elements added) any of the systems in the prior given list to simulate (See Project 1 ->Part I → Task1); or, also, you may pick a serious game to make from the following options:

- Specific driving laws (ex: How to do a proper 3 point turn).
- How to build a PC.
- Exploring the Solar System
- Fun with colours
- Food preparation (f.e. making a pie, making coffee with a coffee maker, barbequing etc, preparing lunch for a high-schooler)
- Catching fish
- Ski resort:
    - lift queuing, loading and unloading (security elements)
    - skiing elements (direction change, braking, slaloms, racing, gear etc)
- Exploring an Ontario Provincial Park and learning about it's flora and fauna
- ...others (needs special approval)

The project is broken down into few distinct deliverables as in the table above.

3 Deliverable 1 - Idea Approval (5%)

3.1 Due: Week 8-9

As a studio you must decide what type of serious/educational game you wish to create.

Write a description of your idea while including as much detail as you have at that moment (High Concept Document template can help).

Hint: Recall that the primary purpose of this game is education. Ensure that your idea is teaching a specific topic or skill first before adding game-like elements to it.

3.2 Submission:

- Proposal (.docx, .pdf)

4 Deliverable 2 - Documentation and Prototype (10%)

4.1 Due: Week 11

As a studio, create a design document for your serious game. You may utilize the same game design document template used in previous classes (and available on eCentennial). Ensure that the document is modified to include aspects of training and education as it is at the forefront of your creation. Your document should include as much information and detail as you currently have at this stage.

Your studio must create an initial prototype in Unity of the idea approved in deliverable 1. This is a very rough proof of concept with the intent to understand the viability and challenges faced in developing your serious game. The prototype must be playable and the core concept of your serious game must be at the forefront of the experience. Graphics and audio at this point, do not matter.

4.2 Submissions:

- Zip of
    - project folder (**not the Library subfolder**),

- build folder (with the .exe; for those working with Macs, a WebGL build folder - **no compression**; hosted build link acceptable)
- GDD file
- text file with a link to the Github repository of your project
- short video (about 1 min) of the playthrough of the initial prototype

5 Deliverable 3 - Playtesting Build(s) and Feedback Reports (5%)

5.1 Due: Week 13

As a studio you will playtest the game of another studio (TBD at the class at that week). While the studios will be matched to eachother, the playtesting and playtesting reporting is to be done **individually**, whereby each member of the studio playtests and reports (using the given Playtest Report Template) to all the members of the other studio and post it in the appropriate Luminate folder. As a studio, collect the feedback reports and **handle them**; either fix bugs/add feature(s) or document in a section of the studio's GDD the rationale of NOT

6 Final Presentations

6.1 Due: Week 14

Present in class as a studio. Every one should contribute in the presentation in a roughly equal manner. Non-contribution or very minor contribution may be ground for grade penalties.

Also, as a studio you will create a short ~3 minute video describing your serious game, to be submitted in the appropriate folder.

Your presentation should talk at least about the following:

- Planning
  - How did your studio approach this project?
  - What tools did you use to stay on task? - How was work divided up amongst studio members?
- Implementation

    - Decisions you made as a studio with your code.
    - How did you implement the tasks in code?
- Demo
    - Demonstrate your working serious game.
- Handling of Playtesting Feedback
- Future
    - What could be done to improve your serious game in the near future; longer one?
    - What pitfalls did you as a studio encounter during development; how do you plan to deal with them in the future?

6.2 Submissions:

- Video presentation in .mp4 or .mkv format (from OBS, for example - YouTube link (alone) is NOT acceptable)
- .pptx of the presentation (or markdeep slides, or prezi slides)

7 Final Deliverables:

7.1 Due: Week 14

- Zip of
    - project folder (**not the Library subfolder**),
    - build folder (with the .exe; for those working with Macs, a WebGL build folder - **no compression**; hosted build link acceptable)
    - GDD file
    - short video (about 1-2 min) of the playthrough of the prototype
    - .pptx of the presentation

8 NB: ALL GAMES MUST CONTAIN THE FOLLOWING

- Start screen containing:
    - Game name
    - Team logo
    - Navigation buttons
- Three levels/maps

    - Progression across maps must be logical and make sense.
- Game over screen
    - Provide the ability to go back to the main menu, or to restart the level.
- Assessment of the learning
    - Provide the ability to assess the learning that have taken place in each level (the boss to be defetated – be creative).
